Intel® Ethernet SFP+ Optics

Network Connectivity

# Intel® Ethernet SFP+ Optics

SR and LR Optics for the Intel® Ethernet Server Adapter X520 Family

- Hot-pluggable SFP+ footprint
- Supports rate selectable 1.25 Gb/s or 9.95 to 10.3 Gb/s bit rates
- Power dissipation < 1 W
- RoHS-6 compliant (lead-free)
- Commercial temperature range 0 °C to 70 °C
- Single 3.3 Vdc power supply
- Max. link length 300 m on 2000 MHZ-km MMF (SR), 10 km (LR)
- Uncooled 850 nm VCSEL laser (SR)
- Uncooled 1310 nm DFB laser (LR)
- Receiver limiting electrical interface
- Duplex LC connector
- Built-in digital diagnostic functions

Intel's family of Intel® Ethernet X520 Server Adapters with SFP+ connectivity are the most flexible and scalable Ethernet adapters for today's demanding data center environments. The escalating deployments of servers with multi-core processors and demanding applications such as High Performance Computing (HPC), database clusters, and video-on-demand are the types of applications driving the need for 10 Gigabit connections. Customers require flexible and scalable I/O solutions to meet the rigorous requirements of running mission-critical applications in virtualized and unified storage environments.

Powered by Intel's third-generation 10 GbE network controller, the Intel® Ethernet 82599 10 Gigabit Ethernet Controller, the X520 server adapter family addresses the demanding needs

of the next-generation data center by providing unmatched features for virtualization, flexibility for LAN and SAN networking, and proven, reliable performance.

To ensure maximum flexibility, Intel supports the ability to mix any combination of the SFP+ optical modules, direct attach copper cables, or 1000BASE-T SFP modules on the Intel Ethernet X520 Adapters. For instance, customers can remove the optical modules that come installed on the adapter and replace them with an Intel® Ethernet SFP+ Optic, an SFP+ Direct Attach Copper Cable, or a 1000BASE-T SFP module. Intel® Ethernet SFP+ Optics are available in both short range (SR) 850 nm and long range (LR) 1310 nm options.

This enables customers to create the configuration that best meets the needs of their data center environment.

**Note:** Other brands of SFP+ optical modules will not work with the Intel® Ethernet Server Adapter X520 Series.

**Note:** When two Intel® Ethernet Server Adapter X520 Series SFP+ devices are connected back to back, they should be configured with the same Speed/Duplex setting. Results may vary if speed settings are mixed.

Notes:

- 1000BASE-SX. Tested with a 2<sup>7</sup> - 1 PRBS. (Transceiver data rate selected through the 2-wire bus in accordance with SFF-8472 Rev. 10.3. Soft RSO is set at Bit3, Byte 110, Address A2h. Soft RSO default state on power up is '0' LOW, and the state is reset following a power cycle. Writing '1' HIGH selects max. data rate operation. Transceiver data rate is the logic OR of the input state of the RSO pin and soft RSO bit. Thus, if either the RSO pin OR the soft RSO bit is HIGH, then the selected data rate will be 9.95 and 10.3 Gb/s. Conversely, to select data rate 1.25 Gb/s, both the RSO pin and the soft RSO bit are set LOW.)
- 10GBASE-SR/SW. Tested with a 2<sup>31</sup> - 1 PRBS. See note above for conditions.

### Environmental Specifications

850 nm SFP transceivers have a commercial operating temperature range from 0 °C to +70 °C case temperature.

## Regulatory Compliance

Transceivers are Class 1 Laser Products and comply with US FDA regulations. These products are certified by TÜV and CSA to meet the Class 1 eye safety requirements of EN (IEC) 60825 and the electrical safety requirements of EN (IEC) 60950. Copies of certificates are available from Intel Corporation upon request.
